

Information need and tools for the participatory Assessment

Table below present the tool recommended and a tentative list of information to be collected during participatory assessment.

Tools	Health*	Disaster Risk Reduction	WatSan	Shelter	Environment	General
Direct Observation	Health Infrastructure Availability/ presence/use of key commodities (ITNs, etc)	Hazard	Condition of WatSan infrastructure	Degree of destruction Living condition Existing urban fabric, links and functionality in relation to other parts of the cities	Identify key environmental issues	Access Condition of children
Community Mapping Hazard/Risk Maps Capacity Resource Map Problem Maps Transect Maps	Health infrastructure Social gathering spots Entertainment spots/hotspots for HIV	Evacuation area Water reservoir, tanks	Access to water Drainages Disease prevalent area Ravines, and its state.	Organization offices All houses with its color code from MTPTC assessment	Waste management Debris distribution Risks and illegal constructions Public perception on environmental issues	Public infrastructure Slope (geographical situation) CAMPS and informal settlement Trees
Seasonal Calendar	Epidemics	Access to water Water			Storm water/flash floods/ floods/	Labor migration Festivals

Tools	Health*	Disaster Risk Reduction	WatSan	Shelter	Environment	General
	Rainy seasons Large community gatherings (holidays, etc)	sources Hurricane, flooding,			Landslides/ Ravine flow rates	Climate patterns Busy period
Historical Profile, Historical Population	Mortality, morbidity Availability and quality of health infrastructure	Land slides Hazard History and scale of disasters	Availability of water per capita Competition for resources	Construction of houses (quality and quantity)	Same as DRR/ WatSan	Demographic changes History of organizations working there Red cross involvement Conflicts, unrest
Focus Group Discussion	General health knowledge, attitudes and behaviors Availability/access to health commodities (ITN, condoms, etc.)	Perception about vulnerability	Perception about solid waste Sustainability of water supply Water availability and accessibility and perception of quality Sanitation acceptable methods	How do they see construction of Houses	Perception about environment Same as WatSan/ DRR/ Health	Environment

Tools	Health*	Disaster Risk Reduction	WatSan	Shelter	Environment	General
Semi structure interview - KI Community leaders, stake holders	Mortality/morbidity data from facilities/MSPP		Water economy	Real estate projects affecting the area and its surroundings	Perception about environment	These will be also guided by information collected during FGD
Semi structure interview – HH	Health related Knowledge, attitudes and practices	Awareness about DP measures				These will be also guided by information collected during FGD
Community/or organization network analysis/stake holder analysis	Which health related CBOs are present ? What they are doing? Resources? Community perception about organizations	Community perception about organization			Environmental projects / organizations	Dynamics, capacity, how long they are working, SWOT, conflicts, Governance, institutions, actors and projects in the area

Tools	Health*	Disaster Risk Reduction	WatSan	Shelter	Environment	General

Mapping of socio-economic factors at the community level	
To be determined by consultant/s	<p>The consultant/s will conduct a socio-economic mapping in 14 camps and 5 neighborhoods in Carrefour Feuilles, to generate an understanding of key socio-economic factors at the community level, such as the following:</p> <ul style="list-style-type: none"> ▪ What percentage of the community relies on the informal sector for its source of income ▪ What percentage of those in the informal sector are women (or children?) ▪ (What are the main sources of income for X percentage of the community) ▪ What are the key markets available to the community/ General barriers to accessing markets ▪ Cost practices on land and housing markets in the local and surrounding areas ▪ Identify key community assets and resources. (What percentage has access?) ▪ Identify community organizations or institutions that provide economic support (who has access?) ▪ What percentage of the community is in debt/What are the main sources of credit? (pre/post earthquake) ▪ What percentage of the community has access to education ▪ What percentage of the community has access to health services ▪ Main sources of support (extended family, community based organizations etc.)
Social Dynamics Assessment	
To be determined by consultants	<p>The Consultant will study the 14 camps and 5 neighborhoods in Carrefour Feuilles on different levels, including:</p> <p>Identity: definition of urban community, identification of forces that federate groups, district and neighborhood's history, places of interest, personalities, names and meaning, traditions as well as</p>

	<p>population's values, religion, origin, lifestyle, main occupation, relationship with other neighborhoods...</p> <p>Institutions and organizations: analysis of active groups in Carrefour Feuilles (political, religious, professional, educational, age-related, gender-related...) and their purpose, size, budget, strength and weaknesses and how they can participate in ARC's program. Assessment of Government organizations (PNH¹, ASEC², CASEC³...) and NGOs, especially their scope of work, their image and results.</p>
