

Stakeholder Consultation: Disability

Recommendations

1. HFA2 should recognise the cross-cutting issue of disability-inclusion and all stakeholders should take appropriate action to respond to the disproportionate impact that disasters have on persons with disabilities.
2. HFA2 should address the significance of investing in disability-inclusive DRR to minimise human and economic loss, safeguard development gains and promote sustainable solutions benefiting all communities.
3. HFA2 should ensure the full and effective participation of persons with disabilities, their families, representative organisations of persons with disabilities and all DRR stakeholders at all levels within DRR policy and practice. Such participation, and universal accessibility, is best ensured by mobilising the expertise and strengths of persons with disabilities themselves.
