"Just give more money to the poor and they'll be OK"

Tearing down the myth through risk analysis applied to social policy formulation

Unsafe Conditions Index in the Dominican Republic

Alonso Brenes

What does the index do?

Analyzes risk of families helped for the Dominican Unified Beneficiaries System

Money transfers to poor families

UCI has been designed in order to:

- ■Calibrate poverty index using local risk analysis.
- ■Improve impact assessments of the social programs.
- ■Incorporate risk and territorial dimension in the public policies formulation processes.

Empirical evidence have shown...

- •More money into the household is not enough.
- Territorial blockades limits social policies and must be addressed.
- Without a territorial approach the impact of the public policies won't be accurate.

Conceptual background

■Three of the four risk drives presented on the United Nations GAR 2009.

Vulnerable livelihoods
Poor governance
Ecosystem decline

Unsafe conditions approach of the Pressure and Release Model (PAR).

Physical environment
Local economy
Social relations
Public actions and institutions
